Btech in Computer Science 2020-2024 CGPA : 8.89
RKGIT , AKTU University

SOFTWARE ENGINEER | INDIA | WILLING TO RELOCATE

Software Engineer with 2.5+ years of experience architecting Java/Spring Boot microservices, event-driven architectures (Kafka/RabbitMQ), and AI/LLM-based automation. Proven ability to improve system throughput by 50%, reduce API latency by 25%, and engineer AI agents handling 95%+ user queries autonomously. Seeking SDE Engineer roles building scalable, cloud-native systems.

WORK EXPERIENCE

Addverb Australia | Software Engineer

Jan 2026 – Present (Melbourne, Australia)

- Diagnosed throughput bottlenecks in GTP picking workflow and drove process optimizations that lifted average output from 800 to 1,200 totes/hr (+50%) across live warehouse operations.
- Architected distributed observability using message brokers and a NoSQL event store, capturing cross-service events to expose irregular-event visibility and accelerate root-cause analysis.
- Identified software-layer gaps blocking the contractual 1,800 totes/hr SLA and partnered with business stakeholders on remediation, unlocking 1.2M AUD in client revenue for the company.
- Introduced new operational processes that segregated business flows and maximised automation utilisation, improving client operational efficiency by 30%.

Addverb Technologies | Software Development Engineer

April 2024 – Dec 2025 (Noida, India)

- Architected scalable microservices in Core Java, Spring Boot, RabbitMQ, Docker, and Kubernetes for a distributed Warehouse Control System (WCS); sustained 99.8% uptime via hardened Jenkins/Git CI/CD pipelines.
- Decomposed monolithic modules into 12+ loosely coupled microservices, cutting API response latency from 800ms to 600ms and improving backend performance by 25%.
- Designed a real-time data pipeline on MongoDB with tuned MySQL/MSSQL queries, processing 10,000+ events/min for warehouse automation with zero data loss.
- Engineered an LLM-powered inventory agent that autonomously resolved 95%+ of user inventory queries, reducing support ticket volume by 40%.
- Built a Python automation for Grafana dashboard migration, cutting manual effort by 95% (8 hrs → 20 min) and migrating 50+ dashboards across 3 network environments.
- Delivered real-time monitoring and hardware health-check dashboards, improving system observability and incident response time by 60%.
- Collaborated in Scrum with QA, DevOps, and Product to ship core WMS features serving 5+ enterprise clients.

NEC Corporation India Pvt Ltd | INTERNSHIP TRAINEE

October 2023 – Jan 2024 (Noida, India)

- Built microservice components in Java and Spring Boot; contributed to production-grade feature delivery and internal tooling.

TECHNICAL SKILLS

Programming Languages: Java (Core/J2SE), SQL, Python

Backend Development: REST APIs, gRPC, Multithreading, OOP, Microservices, Event-Driven Architecture, GraphQL, OAuth2/JWT

Frameworks & Tools: Spring Boot, Spring JPA, API Gateway

Messaging/Queueing & Caching: RabbitMQ, Apache Kafka, Redis

Databases: MySQL, MSSQL, MongoDB

DevOps & Cloud: Docker, Kubernetes, Jenkins, Git, CI/CD

Observability & Monitoring: Grafana, Jaeger, Distributed Logging

Tools: IntelliJ IDEA, Maven, VS Code, Postman

PROJECTS

Maersk-Adidas Global Logistics | WES-ASRS

- Handled and maintained 20+ java microservices (WES, auction, decanting, packing, returns, robotic-arm,boxit, quadron, multipro, interface etc) on Kubernetes/Helm.
- Optimized operations and logic to meet throughput targets, leading to a successful project closure and client recognition.
- Led end-to-end feature delivery for new Change Requests (CR).

UPS Healthcare Project (US-Based) | Movu-Robotic Shuttle Integration

- Engineered seamless third-party hardware integration connecting Movu-Robotic Shuttle Hardware with existing ASRS software solution.
- Designed and implemented a real-time data pipeline using MongoDB, achieving a 99.9% data capture rate from 50+ shuttles.
- Developed dashboard features for real-time hardware visibility, reducing system downtime diagnosis time by 70%.

Lenskart (Bhiwadi, Rajasthan) | Tote Movement Optimization

- Designed and optimized tote movement path routing from ASRS to GTP floor using algorithmic optimization; reduced tote travel time by 15%, improving picking efficiency and reducing system latency by 200+ milliseconds.
- Implemented Java-based pathfinding algorithm leveraging data structures and graph theory; measurably improved warehouse throughput by 12% during pilot phase.

MRF, Ankenpally Hyderabad | 5 deep 9 level Automated Storage and Retrieval System (ASRS) Solution

- Architected and delivered a 5-deep 9-level ASRS solution having a complex design with duplex lifts for a high-volume manufacturing plant.
- Accelerated UAT by 200% through proactive QA collaboration and streamlined testing workflows.
- Took cross-functional leadership initiative—assisted QA and Process teams in completing interface development and testing; accelerated overall client interface testing from 3 months to 3 weeks (90% reduction).

Reliance Grocery | VF-Manual (Value Format Manual- Warehouse Management System)

- Spearheaded end-to-end WMS implementation fixed 70+ critical bugs identified during UAT; ensured 100% delivery of robust, bug-free software to client despite tight timelines.
- Achieved client satisfaction milestone through proactive issue resolution and rigorous testing protocols; received formal "Note of Appreciation" from Project Manager for exceptional delivery.

Contributions to Addverb Product Suite

- Developed an AI agent using LLM model** which helps user to get answers of queries related to inventory details.
- Designed and developed the configuration segregation** of multiple ASRS services using same json config file to re-use the same config in different screens.
- Engineered Python-based Grafana dashboard migration automation script**, reducing manual effort by 95% and enabling rapid deployment of monitoring infrastructure across distributed environments.
- Created comprehensive SOPs and user manuals for WMS and ASRS products** ensuring ISO-standard documentation quality; delivered client-ready materials meeting enterprise compliance requirements.

RFP Management System(Request for Proposal): College Capstone Project

- Designed and developed full-stack procurement management platform** enabling organizations to create, evaluate, and collaborate on vendor proposals; implemented role-based access control serving 3+ user personas.
- Engineered robust reporting engine with 15+ customizable reports; facilitated data-driven decision-making for procurement optimization and vendor relationship management.

KEY ACHIEVEMENTS & RECOGNITION

- Client Satisfaction & Leadership:** Received "Note of Appreciation" from Project Manager for exceptional delivery of VF-Manual project; restored stakeholder confidence through strategic communication and 14 leadership demos to C-suite RIL executives.
- Cross-functional Excellence:** Demonstrated technical leadership in QA collaboration, process improvement, and team coordination; accelerated critical milestones by 90%+ through proactive initiative and mentorship.
- Technology Leadership:** Early adopter of emerging technologies—AI agents, advanced data pipelining, microservices patterns; continuously drive technical innovation in warehouse automation domain.
