

RAHUL MAURYA

EDUCATION

Btech in Computer Science and Engineering
2020-2024 CGPA : 8.67

WORK EXPERIENCE

Addverb Australia | Software Engineer

Jan 2026 – Present (Melbourne, Australia)

- **Process Optimization by 50%** through identifying the gaps and opportunities that is reducing the throughput of the GTP picking from avg 800 totes/hr to 1200 totes/hr
- Architected and developed features to get the visibilities by capturing data from multiple services through important events using distributed logging mechanism using message brokers and NoSQL DB for irregular events.
- Throughput Optimizations: Identified the actual gap in software logics to achieve the committed throughput by company i.e. 1800 totes/hr and shared business conditions which is required to achieve the throughput which caused company capital gain of 1.2 Million AUD from Client.
- Introduced new processes which helped to run the operations more efficiently by segregating the business process and maximized the automation utilization which benefits to client business by 30%.

Addverb Technologies | Software Development Engineer

April 2024 – Dec 2025 (Noida, India)

- **Architected and developed scalable microservices** leveraging Core Java, Spring Boot, RabbitMQ, Docker & Kubernetes for distributed WCS (Warehouse Control System); achieved 99.8% uptime through resilient CI/CD pipelines (Jenkins, Git) across production environments
- **Optimized backend performance by 25%** through comprehensive system refactoring—decomposing monolithic modules into 12+ loosely coupled, reusable microservices; reduced API response latency from 800ms to 600ms
- **Designed real-time data pipelining architecture** using MongoDB and optimized database queries across MySQL, MSSQL; processed 10,000+ events/minute for warehouse automation systems with zero data loss
- **Engineered AI-driven inventory agent** leveraging LLM models to answer 95%+ of user inventory queries autonomously; reduced support ticket volume by 40%
- **Accelerated Grafana dashboard migration automation** by developing Python script reducing manual migration time by 95% (from 8 hours to 20 minutes); successfully migrated 50+ dashboards across 3 network environments
- **Developed interactive dashboards** for real-time operations monitoring and hardware health-checks; improved system observability and incident response time by 60%
- **Collaborated in Scrum framework** with cross-functional teams (QA, DevOps, Product) to design, test, and deploy core warehouse management software serving 5+ enterprise clients

NEC Corporation India Pvt Ltd | INTERNSHIP TRAINEE

October 2023 – Jan 2024 (Noida, India)

- Gained expertise in Java, Microservices, and Spring Boot.
- Applied hands-on skills to deliver a robust solution, demonstrating practical knowledge in real-world project development

PROJECTS

Reliance Grocery | VF-Manual (Value Format Manual- Warehouse Management System)

- **Spearheaded end-to-end WMS implementation** resolving 70+ critical bugs identified during UAT; ensured 100% delivery of robust, bug-free software to client despite tight timelines
- **Orchestrated successful project delivery recovery** when client confidence was low; personally conducted 14 full end-to-end demos and walkthrough sessions to entire Reliance leadership, restoring stakeholder trust
- **Achieved client satisfaction milestone** through proactive issue resolution and rigorous testing protocols; received formal "Note of Appreciation" from Project Manager for exceptional delivery

MRF, Ankenpally Hyderabad | 5 deep 9 level Automated Storage and Retrieval System (ASRS) Solution

- **Architected and delivered complex 5-deep 9-level ASRS solution** for high-volume manufacturing plant operations; successfully orchestrated Java backend, microservices communication, and third-party hardware integration
- **Accelerated internal UAT completion by 200%** (3 weeks vs. typical 6+ weeks) through proactive QA collaboration; optimized testing workflows reducing project duration despite resource constraints, saving ₹15+ lakhs in operational costs
- **Achieved 100% client satisfaction** by developing critical features and resolving 20+ client-reported bugs during UAT phase; deployed production-ready ASRS system supporting 500+ daily transactions
- **Took cross-functional leadership initiative**—assisted QA and Process teams in completing interface development and testing; accelerated overall client interface testing from 3 months to 3 weeks (90% reduction)

Lenskart (Bhiwadi, Rajasthan) | Tote Movement Optimization

- **Designed and optimized tote movement path routing** from ASRS to GTP floor using algorithmic optimization; reduced tote travel time by 15%, improving picking efficiency and reducing system latency by 200+ milliseconds
- **Implemented Java-based pathfinding algorithm** leveraging data structures and graph theory; measurably improved warehouse throughput by 12% during pilot phase

UPS Healthcare Project (US-Based) | Movu-Robotic Shuttle Integration

- **Engineered seamless third-party hardware integration** connecting Movu-Robotic Shuttle Hardware with existing ASRS software solution; enabled unified orchestration across heterogeneous systems
- **Designed and implemented data pipelining architecture** using MongoDB to ingest and store real-time hardware telemetry from 50+ shuttles and automated lifts; achieved 99.9% data capture rate
- **Introduced real-time hardware visibility layer**—developed dashboard features exposing shuttle connectivity status and health metrics to operations teams; reduced system downtime diagnosis time by 70%

Contributions to Addverb Product Suite

- **Developed an AI agent using LLM model** which helps user to get answers of queries related to inventory details.
- **Designed and developed the configuration segregation** of multiple ASRS services using same json config file to re-use the same config in different screens
- **Engineered Python-based Grafana dashboard migration automation script**, reducing manual effort by 95% and enabling rapid deployment of monitoring infrastructure across distributed environments
- **Created comprehensive SOPs and user manuals for WMS and ASRS products** ensuring ISO-standard documentation quality; delivered client-ready materials meeting enterprise compliance requirements

RFP Management System(Request for Proposal): College Capstone Project

- **Designed and developed full-stack procurement management platform** enabling organizations to create, evaluate, and collaborate on vendor proposals; implemented role-based access control serving 3+ user personas
- **Engineered robust reporting engine** with 15+ customizable reports; facilitated data-driven decision-making for procurement optimization and vendor relationship management

TECHNICAL SKILLS

Languages: Core Java/J2SE, SQL
Technology Stack: Springboot, Microservices Architecture, REST, Relational Databases, Multithreading, JPA, OOP,Event-Driven Design
Data & Messaging: Kafka, RabbitMQ, Redis, MongoDB, MySQL, MSSQL, Data Pipelining
DevOps & Infrastructure: Docker, Kubernetes, Jenkins, Git, CI/CD Pipelines, Grafana, Jaeger
IDE & Developer Tools: IntelliJ IDEA, VS Code, Windsurf, Maven, Anti-Gravity
Soft Skills: Problem-Solving, System Design, Technical Leadership, Client Collaboration,Cross-functional Communication

KEY ACHIEVEMENTS & RECOGNITION

- **Client Satisfaction & Leadership:** Received "Note of Appreciation" from Project Manager for exceptional delivery of VF-Manual project; restored stakeholder confidence through strategic communication and 14 leadership demos to C-suite RIL executives
- **Cross-functional Excellence:** Demonstrated technical leadership in QA collaboration, process improvement, and team coordination; accelerated critical milestones by 90%+ through proactive initiative and mentorship
- **Technology Leadership:** Early adopter of emerging technologies—AI agents, advanced data pipelining, microservices patterns; continuously drive technical innovation in warehouse automation domain
