Rahul Maurya

Software Engineer · Backend & Distributed Systems · Java · Spring Boot · Microservices

Melbourne, Australia · Open to relocate · 30-day notice period | +91 79054 96720 | maurya2811@gmail.com | maurya2811.github.io/Portfolio | linkedin.com/in/rahul-maurya-277069227 | github.com/Maurya2811 | leetcode.com/Rahul_2811

SUMMARY

Backend software engineer (2.5+ years) building high-availability, event-driven Java / Spring Boot microservices for enterprise clients in India, the US and Australia: +50% throughput, -25% p95 latency, 10,000+ events/min with zero data loss. Looking for SDE-2 / backend roles at product companies.

EXPERIENCE

Software Engineer (Forward Deployed) · Addverb Australia

Melbourne, Australia — Jan 2026 – Present

- Forward-deployed on a 24/7, **20+ microservice** order-fulfilment platform (Java 17, Spring Boot, RabbitMQ, MongoDB, SQL Server, Angular, Kubernetes / Helm) for the Maersk-operated Adidas distribution centre; own change requests end to end, from client scoping and estimation to production rollout.
- Raised fulfilment throughput by **50% (800 to 1,200 totes/hr)** by measuring per-stage dwell time and fixing work release and allocation logic, closing the gap to the contracted SLA and unblocking a **seven-figure (AUD)** contractual milestone.
- Led root-cause analysis for **20+ production incidents** across the distributed stack (consumer crashes, message storms, race conditions, retry drift), shipping fixes, runbooks, anomaly detectors and design / RCA documents that keep a live site running.

Software Development Engineer · Addverb Technologies

Noida, India — Apr 2024 – Dec 2025

- Decomposed a monolithic warehouse control system into **12+ Spring Boot microservices** over RabbitMQ, cutting p95 API latency from **800 ms to 600 ms (-25%)**.
- Built a real-time event pipeline on MongoDB with tuned MySQL / SQL Server queries, processing **10,000+ events/min with zero data loss** (idempotent consumers, dead-letter queues, replay).
- Mentored interns in the India engineering team.
- Built an LLM-powered inventory assistant (RAG plus read-only tool calls) that auto-resolves **75%+** of operator queries, reducing support tickets by **40%**.

Software Engineering Intern · NEC Corporation India

Noida, India — Oct 2023 – Jan 2024

- Built Java / Spring Boot microservice components and integrated messaging for inter-service communication.

PROJECTS

UPS Healthcare: Movu Robotic Shuttle Integration & Telemetry · United States — Sep 2025 – Dec 2025

- TCP / REST adapters for third-party shuttles; MongoDB telemetry at **99.6% capture** (50+ devices); **-70%** diagnosis time.

Lenskart: Congestion-Aware Tote Routing · Bhiwadi, India — Jun 2025 – Aug 2025

- Java graph routing (Dijkstra + Yen's K-shortest, congestion-weighted): **-200 ms** per decision, **+12%** pilot throughput.

MRF Ankenpally: 5-Deep 9-Level ASRS · Hyderabad, India — Oct 2024 – May 2025

- Orchestrated cranes, shuttles and duplex lifts for **500+ daily transactions**; interface testing cut from 3 months to 3 weeks.

Reliance Retail: VF-Manual WMS · India — 2024

- Fixed **70+ critical UAT defects**, ran 14 leadership demos; formal note of appreciation from the PM.

TECHNICAL SKILLS

Languages: Java 17, SQL, Python, TypeScript / JavaScript
Backend: Spring Boot, Spring Data JPA, REST APIs, microservices, event-driven architecture, multithreading & concurrency
Messaging & Data: RabbitMQ, Apache Kafka, Redis, MongoDB, MySQL, SQL Server
Cloud & DevOps: Docker, Kubernetes, Helm, Jenkins, Git, CI/CD, nginx; AWS (EC2, EKS, S3, RDS, IAM) working knowledge
Frontend: Angular, HTML / CSS; React and Node.js (project experience)
AI: LLM APIs, RAG, tool-calling agents, AI-assisted development (Claude Code)

EDUCATION

B.Tech, Computer Science & Engineering

Raj Kumar Goel Institute of Technology, Ghaziabad (AKTU) · CGPA 8.89 / 10 — 2020 – 2024
